12-year-old Aidan Good was diagnosed with a fatal heart defect when he was 3 years old. He received a heart transplant and required multiple blood transfusions during surgery. He was back at the hospital this past summer receiving treatment, including plasma transfusions due to his body rejecting his heart transplant. By the end of the year he will have had 7 heart biopsies, each requiring blood in the room in case he needs it. Additionally Aidan has undergone three brain surgeries in 2016 to remove a tumor to treat his seizures.
